

TABE MIRACLE FIAGMENYI (TAMIF)

Full-Stack & Applied AI Engineer · Buea, Cameroon · tabe7143@gmail.com · (+237)
680-553-744 · github.com/dontman-tech · linkedin.com/in/tabe-miracle-fiagmenyi

I ship complete products end to end: full-stack web and mobile, applied AI pipelines, and offline-first systems that keep working when connectivity doesn't. Currently building Phoney, a Linux "Phone Link" desktop companion on the KDE Connect protocol.

SELECTED PROJECTS

ARIA — Voice AI Assistant · Python, Kotlin, Flask, DeepSeek API, PWA

- Voice-first assistant with a modular skill router, long-term memory, and offline deterministic fallbacks.
- Android bridge server controls device Wi-Fi, flashlight, alarms and screenshots natively; PWA control panel for any device.
- Core skills keep working in airplane mode — cloud AI is a pluggable upgrade, not a dependency.

Phoney — Linux Phone Link · Python, KDE Connect protocol, TLS, systemd (*in active development*)

- Desktop companion pairing Linux with Android: notifications, file transfer, clipboard sync, SMS, calls, screen mirroring.
- Protocol implementation over UDP discovery (port 1716) with TLS-secured pairing.

Re-kollect — Waste Collection Marketplace · Flutter, Firebase, Nominatim, FCM

- Two-sided marketplace connecting waste generators to independent collectors.
- Role-based auth, Firestore request lifecycle, live map pinning with geocoding, FCM fan-out to nearby collectors.

Pulse Fit — Fitness Tracker · React Native, Expo, HealthKit, Google Fit

- Cross-platform tracker with custom workout plans, animated progress rings, bidirectional health sync.
- Simulated-data fallback keeps the app fully functional when sensors or permissions are missing.

Air Canvas — Gesture Drawing · Python, MediaPipe, OpenCV

- Real-time webcam hand tracking driving a five-gesture drawing mode machine (draw/hover/erase/palette/clear).
- Temporal smoothing tuned to eliminate pinch jitter at 15 fps on commodity webcams.

SKILLS

Languages: Python, JavaScript/TypeScript, Dart, Kotlin

Web/Mobile: React 19, Next.js, Tailwind 4, React Native, Expo, Flutter

Backend: Flask, FastAPI, Node.js, Supabase, Firebase (Auth/Firestore/FCM), SQLite, REST APIs

Applied AI/Vision: DeepSeek API, OpenAI, Claude, MediaPipe, OpenCV, on-device voice pipelines

Practices: offline-first design, graceful degradation, native Android bridges, Docker, Git

EDUCATION

B.Eng. Computer Engineering — University of Buea, Cameroon (in progress)

HIGHLIGHTS

Hackathon award-winning execution; built production MVPs under 15-hour hackathon constraints (Lumina — challenge placement).
